Hello everyone, welcome to today's lesson about the dishwasher. You will learn how to explain the different parts of a dishwasher in English. So let's start!

This is a dishwasher. There's a large front door with a door handle that helps you access the inside part. The door has a control panel with buttons to set the washing cycle and a screen that shows the remaining wash time.

Inside the door, you will see two parts; the detergent dispenser for liquid or powder, and the rinse aid dispenser for a special liquid that prevents spots and streaks on your dishes.

Inside the dishwasher, you'll find some dish racks that slide out on rails, a compartment for the cutlery where you can put your knives, spoons, and forks, and the spinning part called the spray arm that rotates and sprays water to clean the dishes. At the bottom, there is a round opening called the drain, which is where the dirty water goes out. And the part with a plastic basket is the filter. It traps food particles to keep them from clogging the drain.

This part is the salt container or salt dispenser for the dishwasher. Special dishwasher salt softens the water which helps the detergent work more effectively and prevents limescale buildup on both the dishes and the machine's internal components. By removing the cap, you can add the salt.

So, whenever your kitchen counter is full of dishes, load them in the dishwasher. When the dishwasher is done, unload it after waiting a few minutes. Don't open the door

immediately after the dishwasher is finished to let the hot air and steam escape.

Alright, we're done with this lesson. Thanks for watching.

Vocabulary list:

Detergent: A chemical substance, typically in powder or liquid form, used for washing.

Dispenser: A device that releases a measured amount of something.

Drain: The opening through which dirty water leaves the dishwasher.

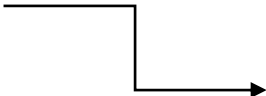

Countertop: The flat surface on top of a kitchen cabinet.

Limescale: It's a hard, chalky white deposit that builds up in appliances and on surfaces that regularly come into contact with hard water, especially when the water is heated.

Component: It can be a physical part of a machine or a necessary element of a system or process.

Different types of Structures:

Inside the dishwasher, you ll find some dish racks that slide out on rails.

Short form
of the
word "will"

You will learn how to explain the different parts of a dishwasher in English.

Using for
the future
tense.

We use 'WILL' to show we are talking about future situations and conditions. This word is used in formal writing, for sudden decisions based on spontaneity, promises, facts that cannot be changed, predictions we expect to happen, and for probability that depends on your certainty.

More examples:

What would you like to drink? I **will** have coffee.

I promise I'll study hard for the upcoming exam.

The sun **will** set at 8 pm.

The road **will** be closed from Saturday to Sunday.

Team C **will** probably win the game.

Base
form of
the verb

It's passive
voice that you
can find this
grammar in the
pdf related to
the Kitchen
stuff about the
"Stove"

Structure rules:

The Subject comes first followed by "will", and the base form of the verb. The rest of the sentence is based on what you want to say.

Practice: Rewrite the simple present structures with the future tense:

Ana practices English on Thursday.

.....

Joe and Jack remember their previous travelling to Canada.

.....

My mother always prefers watching cartoons to movies!

.....

He does the laundry himself.

.....
